

# NIRANJAN SANKESHWARI

## Java Backend Developer

niranjansankeshwari9@gmail.com | +919606694256 | Bengaluru, India | linkedin.com/in/niranjans8/ | github.com/NiranjanS8

### SUMMARY

Backend-focused software engineer with hands-on experience building Spring Boot applications, REST APIs, and distributed systems using Redis and message queues. Built multiple end-to-end backend systems with authentication, caching, and real-time features, improving API performance by up to 60–70% in project environments

### EXPERIENCE

#### Dyashin TechnoSoft Pvt Ltd.

02/2026 – 06/2026 | Bengaluru

##### Java Developer Intern

- Contributed to the development of a certificate generation system using Spring Boot and PostgreSQL, enabling automated certificate creation and recipient management.
- Built REST APIs for participant registration, template management, eligibility validation, and certificate generation workflows.
- Implemented JWT-based authentication and role-based access control for secure access to administrative features.
- Worked with file generation and storage workflows for dynamically generated certificates and downloadable assets.
- Designed asynchronous certificate generation workflows for bulk recipient processing using queue-based architecture concepts.

### SKILLS

**Languages:** Java, Python

**Backend:** Spring Boot, Spring MVC, Spring Security, Spring Data JPA, RESTful APIs, JWT Authentication

**Databases:** MySQL, PostgreSQL, Redis

**Cloud:** AWS (EC2, S3, RDS, IAM), Docker, Docker Compose

**Tools:** Git, Maven, Postman

**Testing:** JUnit, Mockito

### PROJECTS

#### Quizze

- Built a full-stack quiz platform using **Spring Boot, PostgreSQL, and Redis**, implementing **JWT-based authentication and RBAC (Admin/User)** with a clean, scalable backend architecture.
- Designed end-to-end quiz workflows (creation, timed attempts, auto-evaluation, leaderboards), handling 100+ daily submissions reliably.
- Implemented **asynchronous event processing** using Kafka for notifications, decoupling request handling from background tasks.
- Improved API response time by **~60% (300ms → 120ms)** using Redis caching for high-read endpoints.
- Added monitoring dashboards using **Prometheus and Grafana** to track API latency and system performance.

#### SnapURL

- Built a URL shortening platform using **Spring Boot, React, MySQL, Redis, and RabbitMQ**, supporting secure link creation, redirection, and analytics.
- Designed backend APIs with **JWT authentication, refresh token flow, OTP-based password reset**, and collision safe short URL generation with custom alias validation.
- Reduced **API response latency by ~70% (160ms → 90ms)** using Redis, and implemented **API rate limiting and login throttling**.
- Implemented **asynchronous analytics pipeline using RabbitMQ**, decoupling click tracking from request handling
- Deployed on **AWS EC2 with Docker and Nginx**, configuring HTTPS, DNS, and reverse proxy for production access

#### Whisprly

- Built a **real-time chat backend** using Spring Boot and **WebSocket/STOMP**, enabling low-latency messaging with typing indicators, presence tracking, and unread updates for concurrent users.
- Implemented secure authentication with **JWT access tokens, refresh-token rotation and revocation**, and **Google OAuth** integration using Spring Security.
- Engineered distributed state management using **Redis for presence/session** handling and PostgreSQL for persistent message and user data.
- Applied **Flyway-based schema versioning, event-driven processing, centralized exception handling, and observability** to improve system reliability and maintainability.

### EDUCATION

#### BE in AI and Data Science

2022 – 2026 | Bangalore, India

East West Institute of Technology (EWIT)

GPA 8.3/10
